Introducing IntelliChlor® Salt Chlorine Generator for Commercial Pools

Thanks to the new IntelliChlor® salt chlorine generator, buying and installing salt chlorine generators for commercial applications has never been easier. IntelliChlor systems feature pre-plumbed manifolds for fast, simple installation. Ordering is a breeze; just specify the pounds of chlorine to be generated each day.

The IntelliChlor generator's compact size means it can be easily adapted to practically any commercial equipment set-up. Should one of the secondary chlorinating cells become non-operational, the remaining cells continue to function without interruption.

These commercial chlorinator systems require the use of an external ORP control system (sold separately) to produce chlorine upon demand. Pentair recommends the Acu-Trol® AquaPC OnPoint pH/ORP control system (PN 521020).

Other features include:

- Commercial coated cell blades
- Built-in intelligence—Primary cell reads salt levels and communicates to all secondary cells. Performance data captured daily for easy diagnostics. Cell life tracking feature communicates remaining hours of cell life in real time
- Pre-plumbed manifolds and pre-wired power center with ORP capability speed and simplify installation while providing greater chemical control
- Automatic shut-off feature protects the unit and prolongs cell life under low water/low temperature conditions
- Choose from 2 lb./day chlorination output (1 Cell) all the way up to 32 pounds (16 cells)

Ordering information is listed on the next page for your convenience.
